Restore & Care Programme

**Perfect for restoring the original beauty
of bathroom fixtures, kitchen
appliances and ceramic sinks**

Objektfotos, Titelseite: Villeroy & Boch

**The complete assortment
for repairing and maintaining
kitchens and bathrooms**

Kitchens and bathrooms are among the most used rooms in the home today; high demands are placed on them every day. The resulting damage and wear and tear not only diminish their value, they leave the kitchen and bathroom looking unsightly.

Our repair and care programme offers you an extensive assortment to alleviate these problems. From minor repairs to daily care, you'll find the right product designed with the consumer in mind.

**You don't need to be a specialist in
order to perform cost-saving and
professional repairs.**

Cramer Repair-Kit

for the professional repair of
ceramic, enamel and acrylic surfaces

For the repair of impact damage and flaking on washbasins, kitchen sinks, shower trays and bath tubs with enamel, ceramic (porcelain) and acrylic surfaces.

The kit can be applied for up to seven average size repairs:

2 components: filling compound with hardener, spatula, sand paper for the repair of ceramic, enamel and acrylic surfaces, repair spray.

For professional and cost-saving repairs when ease and perfect results are important.

3 easy steps to perfect repairs

Make sure the damaged area is clean, dry and free from grease. Remove loose pieces and rust.

Thoroughly mix the repair compound and the hardener. Evenly spread the mixture with the spatula.

Leave for 30 minutes. Using the enclosed sandpaper, thoroughly sand and remove dust.

Apply spray in several thin coats...

..finished!

Touch-up Stick

to repair minor defects,
scratches and flaws

The Cramer Touch-up Stick enables you to easily correct minor defects quickly and economically. Designed for ceramic, enamel, acrylic, powder coated and lacquered surfaces.

The Touch-up Stick is a filling compound and final coat all in one. Therefore it is ideal for the repair of impact damages, scratches and lacquer flaws on sanitary fixtures, tiles, fittings, heaters, kitchen sinks, ovens, refrigerators, washing machines and furniture.

Likewise, missing glaze on tile corners can be replaced and corrected.

Ceramic-Enamel Spray

for lacquering enamelled and
powder coated surfaces

Durable and thermo-resistant repair lacquer that meets industry standards. Designed for correcting and re-coating enamelled, powder coated and lacquered surfaces in the kitchen and bathroom.

With the Ceramic-Enamel Spray, heaters, hot water boilers, facings, refrigerators, washing machines and accessories can be easily re-furbished or given a new colour.

This product is only splash-proof. Do not use on floors.

Bath-Rubber

removes tough stains, metal abrasions
and rust without scratching

You know the problem: paint marks, adhesive residue, lime scale, metal abrasions and tough stains on bath and shower basins, ceramic sanitary fixtures, sinks, tiles and floors.

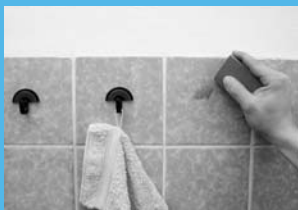

Often, normal cleaning products fail to remove these residues or cause damage and discolouration to the material.

Bath Rubber helps you to eliminate these problems. Bath Rubber's composition enables you to thoroughly remove deposits without scratching. Usable on enamel, ceramic and chrome surfaces.

Email-Star

gentle cleansing and care for porcelain,
enamel, chrome and stainless steel

Most sanitary cleaning products on the market contain strong acids to remove lime deposits. However, because commercial sanitary enamel is not acid-resistant, prolonged usage dulls the surface. Cleaning products containing sand can also cause similar damage.

Cramer Email-Star was designed for daily and environmentally friendly cleaning and care and is acid-free. It cleans based on a combination of the right detergent with a special polishing compound. Matched to the exact hardness grade of ceramic and enamel surfaces, lime deposits, discolouration and tough stains are easily removed without damaging the surface.

Acryl-Star

combined cleaning and polishing compound
for acrylic, polyester and fibreglass surfaces

Until now, two different products were needed for the daily cleaning and maintenance of acrylic surfaces and for removing scratches and wear and tear. Acryl Star cleaning and polishing compound's advanced composition satisfies both demands.

Cleaning and care: The Cramer Acryl-Star removes lime scale, discolouration and tough deposits without scratching. The cleaning technique is based on a combination of the right detergent with a special polishing compound. Existing minor scratches are removed.

Scratches and wear and tear: Use undiluted with a soft cloth to achieve a high gloss finish.

environmentally safe - acid free

FUGI Tool Kit

for easy use of
flexible sealants and caulks

The FUGI Kit helps to achieve clean profiles and permanent sealing.

- Stripping knife with two different hardened metal blades. Removes old, leaky silicone and grout lines.
- FUGI forming tools with 16 profile shapes. Produces step-by-step profiles without masking tape or cleaning afterwards.

A releasing agent (soapy water) is not needed to apply the soft caulking mass (silicone).

This process results in better adhesion and prevents mould from forming underneath. In the event that the profile application is not perfect, it is possible to remake isolated parts without having to remove the entire profile.

professional profiles only in 3 steps

Remove old caulking with saw blade. Whatever is left on tiles or other smooth surfaces can be removed with the scraping blade.

Apply the caulking mass. Since there is no need for a releasing agent, just work step-by-step, by only doing short distances.

Choose caulking line shape. Make sure both edges touch both surfaces. Slightly press FUGI and pull.

If necessary, use FUGI II with guiding aid to assist you in crossing grout joints.

.... Done!

**no masking tape
no cleaning afterwards
no releasing agent**
